IL GRANDE PROBLEMA: ANCORA ECCESSI SULLA LEVA FINANZIARIA

Francesco Caruso

Copyright © 2011 - All Rights Reserved

L'INVERNO DI KONDRATIEFF

- Indebitamento e sovracapacità insostenibili → svolta secolare della Borsa deflazionata
 - Scoppiano bolle speculative (azionarie ed immobiliari) tra crisi e scandali finanziari
 - Riduzione della produttività
 - Svalutazioni competitive e tensioni commerciali
 - Accentuazione delle tendenze deflazionistiche
 - Crescenti tensioni sociali e internazionali.
-
- Al termine l'indebitamento e lo sfruttamento dei fattori produttivi saranno ridotti a livelli tali da favorire la successiva duratura ripresa dell'attività produttiva.
-
- Investimenti migliori: cash, oro, obbligazioni (ma attenzione alle crisi finanziarie).

“Politics is nothing more than the foam on the waves of the supercycles. Politicians believe themselves to be the drivers of history -- but they are driven by it and try to regulate something that regulates itself . As individuals, some may have achieved an understanding of what is happening, but in mass societies they lack the power and the ability to thwart the statistical laws of history. ” (Flynn, 2001)

CONCLUSIONI

- Il ciclo positivo iniziato nel 2009 è FINITO
- Tutti gli indicatori economici e finanziari sono NEGATIVI: è in atto un MECCANISMO PERVERSO.... RALLENTAMENTO → TAGLI OCCUPAZIONALI → RIDUZIONE DEI CONSUMI → STRETTA CREDITIZIA → DIFFICOLTA' DI ACCESSO AL CREDITO INTERBANCARIO → USO DEL RISPARMIO GESTITO COME BANCOMAT DEL SISTEMA BANCARIO
- Output 2012:
 - 40% crescita zero
 - 40% recessione (= crescita negativa)
 - 20% depressione (= crescita fortemente negativa)
- I tassi a breve sui minimi e la curva piatta sono fattori PEGGIORATIVI:
 - Nessuno stimolo alla crescita dal calo dei tassi
 - Nessuna possibilità di creare leva finanziaria positiva tramite il carry trade
 - Grandi difficoltà per la redditività di assicurazioni e fondi pensione
- I meno colpiti dalla crisi saranno i MERCATI EMERGENTI
- A questo si aggiunge la CRISI DEI DEBITI PUBBLICI e dell'EURO e la presenza di 4500 MILIARDI di USD di TITOLI TOSSICI nelle banche occidentali
- L'investimento migliore: LAVORO e ZERO DEBITI
